

Logarithmic antenna: 200-1000 MHz

The Logarithmic antenna is particularly suitable for EMC and EMI test applications for Transmission and receiving measurements in the range: 200-1000MHz. It is designed to suppress unwanted side lobes signals.

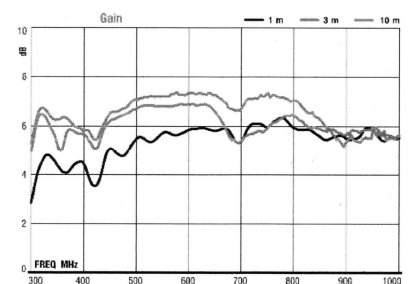

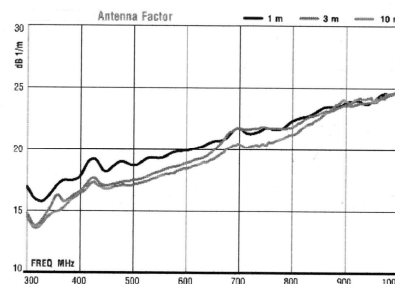

Key Feature

Engineered and completely manufactured in Italy and Brazil.
Ruggedized fully aluminium construction.
Protective treatment with epoxy paint RAL white colour.
High effective power handling capacity.
Excellent quality at Low cost

Technical Specifications

50 Ohm N connector type or 7/16 on demand.
Up to 2" mounting clamp.
Customized options available on demand.

Other products by Emctest:

GTEM cells, TEM and Stripline cells, Helmholtz coils, Hi power measurements antennas, Modular Shielded chambers, semi-anechoic chambers, reverberation chambers, Reverberation tents. Coaxial triaxial cells, Customized RF equipments for EMC and EMI tests.
